1.The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sun et al essentially for reasons of record.

2.Applicant's arguments filed November 4, 2009 have been fully considered but they are not persuasive. Applicant suggests that the applied reference teaches forming the carrier first and then the light shaping unit. While this may be true, it is not seen how this in any manner obviates the rejection. The instant claims call for forming the light shaping unit prior to forming the **micromechanical structure** --that moves the light shaping unit-- **not the carrier**. Indeed, the micromechanical structure responsible for moving the light shaping unit--ie, the comb drive-- is not the carrier, per se, but is made **from the carrier**. In fact, the passage pointed out by applicant at col. 3, lines 26-31 allegedly teaching against the instant claims appears to suggest that claim 1 may in fact be anticipated, since the photoresist is formed into the lens first and then the comb drive structure--ie, the micromechanical structure-- is etched. Sun et al teaches, as does the instant, that the light shaping unit and the micromechanical structure are made of different materials--the former a polymer resist and the latter silicon. Hence, comments made in the second paragraph of page 11 of the amendment are simply in error. In truth, applicant's arguments notwithstanding, it is simply not seen how the instant claims differ in any patentable way from Sun et al. The instant specification discloses that the

instant method is essentially that disclosed by Sun et al, and hence the instant claims must also be encompassed thereby. There is no reworking of Sun et al required to meet, or render obvious, the instant claims. Claim 8 would have been obvious, given that the lens would have been made prior to the etching of cavity 15. Since the lens had not yet been made, clearly it could not function as an etch stop. However, it would have been within the skill level of the art to make the lens first and let it function as set forth in instant claim 8.

**3.THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
